

# GW850 AIRMEX

## High performance ceramic mesh

self-grip

### APPLICATIONS

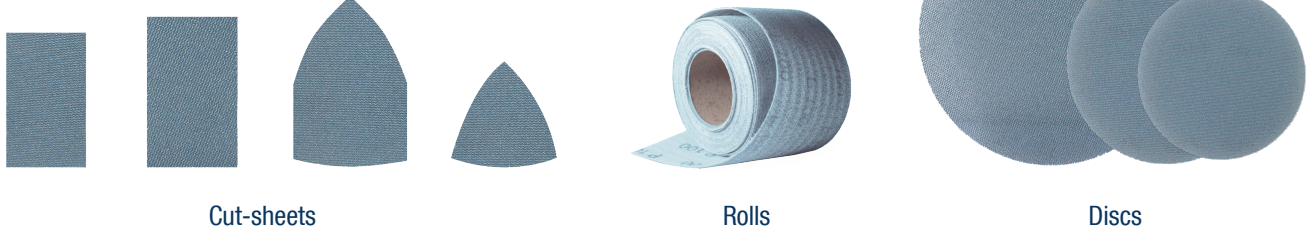

- Hand sanding or machine sanding.
- For sanding any surface, but especially recommended for sanding soft materials which raise lot of dust like painting, plasters, coats or wood.
- Thanks to ceramic grain, efficient on tough surfaces.
- Dry sanding.

### ADVANTAGES

- Very open mesh which make dust suction very efficient on all the surface of the disc or cut-sheet.
- The design and composition of GW850 **AIRMEX** give it flexibility (the mesh doesn't break) and stiffness (the mesh doesn't warp).
- The mesh is designed to reduce the heating while sanding.
- Very long-lasting. The ceramic grain keeps its cut-power as long as abrasive's use.

### AVAILABLE SHAPES

### TECHNICAL DATA

- Backing: polyamide mesh + layer of self-gripping
- Bonding: resin
- Grain: ceramic
- Coating: open
- Grit: P80, P100, P120, P150, P180, P240, P320, P400,
- Usual finish: self-grip
